About ICC-CNS

Cognitive Computing integrates human-like intelligence with advanced computational techniques to solve complex problems across modern digital ecosystems. Today, cognitive science is tightly coupled with artificial intelligence, machine learning, deep learning, data analytics, and intelligent communication systems for handling large-scale multimodal data. In parallel, advanced networking systems including 5G/6G, IoT, edge/fog computing, distributed networks, and autonomous communications play a crucial role in enabling real-time cognition and intelligence. The International Conference on Cognitive Computing and Networking Systems (ICC-CNS 2027) aims to bring together researchers, scientists, academicians, and industry professionals to share their innovations in cognitive intelligence, intelligent networking, autonomous systems, and next-generation communication technologies.
